

Casing Hangers / Secondary Seals

SWECO's automatic casing hangers incorporate a lower packoff, slip bowl, and slips. The packoff is energized by the weight of the casing to provide a positive annular seal.

Features

- Heavy duty latch and hinge
- Latch cap screw prevents accidental opening of hanger
- Minimum number of parts
- Packoff is automatically energized with casing weight

Flange Size	Casing Size	Part Number
11"	4-1/2"	
11"	5"	
11"	5-1/2"	
11"	7"	
11"	7-5/8"	
13-5/8"	8-5/8"	
13-5/8"	9-5/8"	

SWECO's PE secondary seal is inserted in the bottom preparation of a casing spool or tubing spool and retained with a snap wire. The seal is energized when the spool is installed over the casing stub and the flange connection is made up.

Designed for high pressure applications, **SWECO's** HPE secondary seals have a threaded bottom compression plate to be inserted in the bottom preparation of casing spools or tubing spools with threaded preparations.

Available in standard API casing sizes.
